

Ensuring Cleanroom Environment

TempNet® Cleanroom environmental monitoring system is a reliable way to ensure your clean room meets the conditions it needs to. It saves time by enabling all monitoring data to be collected in one easy-to-use cloud platform view with online access. Real-time condition measuring and data access through the TempNet® Cloud also provide smart alarms to the right people if user-set limits are exceeded. TempNet® Cleanroom includes solutions for the monitoring of temperature, relative humidity, pressure difference and particles.

Can be integrated with existing building automation

- All your data in one place

Sensire's sensors offer high precision measuring capabilities combined with durable design. You can set alarm limits according to your need in TempNet® Cloud. With wireless technology, relocation or expanding your monitored area with additional survey points is also exceedingly easy if the need arises.

Sensors

Continuous monitoring

Wireless and automated, these small sensors send real-time data to the cloud 24/7. Measure temperature, CO₂, particles, pressure difference etc. according to your needs.

Gateway

Data transmitted via gateway

Remote control of sensor networks and sensors. Gateway has factory-set 3G internet connection which enables wireless data transfer.

TempNet® Cloud

Secure access to your data

One-stop access to all your temperature and conditions data, effortlessly over the internet to a device of your choice.

One-view solution for all measurement data management

All TempNet® -products are based on **TempNet® Cloud**, a one-view, secure-access modular platform that gathers the data from all your sources. The Cloud can be easily integrated with existing monitoring systems, allowing the user to monitor all conditions in real time and handle overall management, reporting and process development with ease. Real-time data in TempNet® Cloud provides smart alarms if exceptions should happen, making corrective actions possible. The Cloud is hosted by Sensire, so no server investments are required.

Real-time monitoring with TempNet® Cloud

Accessibility

Anywhere, anytime

TempNet® Cloud only needs an internet connection to give you access to all your data and it can be used on any device.

Alarms

When things go wrong

Adjust the alarm thresholds according to your needs and get notified when they are breached. Enables you to take corrective actions and avoid unnecessary expenses.

Reporting

Full visibility

One-stop access to all your temperature and conditions data, effortlessly over the internet to a device of your choice.
