**Compatible with**
TempNet® Truck
and
TempNet® Storage

TempNet® Logger

Real-time temperature monitoring with endless possibilities

TempNet® Logger is a matchbox-sized wireless temperature sensor that is usable in all transportation temperature monitoring – the sensor fits all thermo boxes and packages. For temperature monitoring purposes our sensors come in two options, with manual or automatic start/stop function. In both cases data upload to TempNet® Cloud happens automatically once the transportation ends and the sensors come in contact with a gateway device.

TempNet® Cloud

Suitable for any thermo box

• Stand-alone and easy to install system

TempNet® Logger sensors are designed for heavy use, with temperature measuring range from -15 - +75°C. The sensors are easy to install and replace within the box, and can be cleaned by rinsing (IP67). Wall-mountings are included in the package.

Sensors	**Gateway**	**TempNet® Cloud**
Continuous monitoring	Data transmitted via gateway	Secure access to your data
These small wireless sensors send real-time temperature data to the cloud 24/7. Measuring range from -15 - +75°C.	Remote control of sensor networks and sensors. Gateway has factory-set 3G internet connection which enables wireless data transfer.	One-stop access to all your temperature and conditions data, effortlessly over the internet to a device of your choice.

One-view solution for all measurement data management

All TempNet® -products are based on **TempNet® Cloud**, a one-view, secure-access modular platform that gathers the data from all your sources. The Cloud can be easily integrated with existing monitoring systems, allowing the user to monitor all conditions in real time and handle overall management, reporting and process development with ease. Real-time data in **TempNet® Cloud** provides smart alarms if exceptions should happen, making corrective actions possible. The Cloud is hosted by Sensire, so no server investments are required.

Real-time monitoring with TempNet® Cloud

Accessibility

Anywhere, anytime

TempNet® Cloud only needs an internet connection to give you access to all your data and it can be used on any device.

Alarms

When things go wrong

Adjust the alarm thresholds according to your needs and get notified when they are breached. Enables you to take corrective actions and avoid unnecessary expenses.

Reporting

Full transparency

Having full visibility to your cold chain means you don't have to waste time or money on claims and arguments – detailed reports make validation easy.
