

TempNet® Storage

Intelligent solution for automated temperature and humidity monitoring

TempNet® Storage is a temperature monitoring system that combines wireless sensors and a cloud-based interface. It lets you monitor your storage conditions over the internet on a device of your choice. The solution is scalable, so it fits everything from fridges to logistics hubs and warehouses. Wireless sensors enable the mapping of hot or cold spots in the storage area. All gathered data is immediately accessible online in the TempNet® Cloud platform.

It is independent of any building automation

- Stand-alone and easy to install system

Sensire's sensors are designed for heavy use, with temperature measuring range from -30 - +75°C and relative humidity range from 0 to 100%RH. You can set alarm limits according to your need in TempNet® Cloud.

Sensors

Continuous monitoring

These small wireless sensors send real-time temperature data to the cloud 24/7. Temperature range from -30 - +75°C, relative humidity range from 0 to 100%RH.

Gateway

Data transmitted via gateway

Remote control of sensor networks and sensors. Gateway has factory-set 3G internet connection which enables wireless data transfer.

TempNet® Cloud

Secure access to your data

One-stop access to all your temperature and conditions data, effortlessly over the internet to a device of your choice.

One-view solution for all measurement data management

All TempNet® -products are based on **TempNet® Cloud**, a one-view, secure-access modular platform that gathers the data from all your sources. The Cloud can be easily integrated with existing monitoring systems, allowing the user to monitor all conditions in real time and handle overall management, reporting and process development with ease. Real-time data in TempNet® Cloud provides smart alarms if exceptions should happen, making corrective actions possible. The Cloud is hosted by Sensire, so no server investments are required.

Real-time monitoring with TempNet® Cloud

Accessibility

Anywhere, anytime

TempNet® Cloud only needs an internet connection to give you access to all your data and it can be used on any device.

Alarms

When things go wrong

Adjust the alarm thresholds according to your needs and get notified when they are breached. Enables you to take corrective actions and avoid unnecessary expenses.

Reporting

Full transparency

Having full visibility to your cold chain means you don't have to waste time or money on claims and arguments – detailed reports make validation easy.
