

## TempNet® Truck

# Intelligent solution for on-wheels temperature and location monitoring

TempNet® Truck is a specialized temperature monitoring system for on-wheels transport that includes a gateway device and two sensors per vehicle. Our wireless sensors can track transportation temperatures even in harsh conditions. The GPS gateway enables reliable real-time access to transportation locations and route information. The gateway also transfers all gathered data into the TempNet® Cloud platform, where it is immediately accessible online.

It is independent of any truck or van manufacturer

- Stand-alone and easy to install system

### Sensors

Continuous monitoring

Designed for heavy use, these small wireless sensors send real-time temperature data to the cloud 24/7. Measuring range from -30 - +75°C.

### Gateway

Data transmitted via gateway

Remote control of sensor networks and sensors. Gateway has factory-set 3G internet connection which enables wireless data transfer.

### TempNet® Cloud

Secure access to your data

One-stop access to all your temperature and conditions data, effortlessly over the internet to a device of your choice.

# One-view solution for all measurement data management

All TempNet® -products are based on **TempNet® Cloud**, a one-view, secure-access modular platform that gathers the data from all your sources. The Cloud can be easily integrated with existing monitoring systems, allowing the user to monitor all conditions in real time and handle overall management, reporting and process development with ease. Real-time data in TempNet® Cloud provides smart alarms if exceptions should happen, making corrective actions possible. The Cloud is hosted by Sensire, so no server investments are required.

## Real-time monitoring with TempNet® Cloud

### Map

Track your trucks

Get real-time information on your vehicle locations and transportation routes in one map view.

### Alarms

When things go wrong

Adjust the alarm thresholds according to your needs and get notified when they are breached. Enables you to take corrective actions and avoid unnecessary expenses.

### Reporting

Full transparency

Having full visibility to your cold chain means you don't have to waste time or money on claims and arguments – detailed reports make validation easy.
