

We are part of a project funded by the European Regional Development Fund (ERDF)

Sensire Ltd. International Market Entry

The transportation solution that is developed with the funds from the project will empower customers to develop the reliability of their logistics process, decreasing the number of failed transportations and wasted goods. The solution increases the customers' understanding of their logistics process, giving them the abilities needed to develop more efficient practices. Among other benefits, enhancing the logistics process lessens the strain these operations put on the environment and indirectly helps develop the environmental know-how of the customers' staff.

Through this project, Sensire can initiate faster internationalization and find growth that will also materialize in the form of new vacancies, equality being an important factor in the hiring process.
